A;Title: Genome sequence of enterohemorrhagic Escherichia coli O157:H7.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cross-references: GB:AE005174; NID:g12517320; PIDN:AAG57943.1; GSPDB:GN00145; UWGP:Z41; Skeperimental source: strain O157:H7, substrain EDL933
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    methyl-directed mismatch repair [imported] - Escherichia coli (strain 0157:H7, substrain
                     Ricrafstrom, R.H.; Hoess, R.H.

Nucleic Acids Res. 15, 3073-3084, 1987

Airlie: Nucleotide sequence of the Escherichia coli muth gene.

Airlie: Nucleotide sequence of the Escherichia coli muth gene.

Airlie: Nucleotide sequence of the Escherichia coli muth gene.

Airlie: Nucleotide sequence of the Escherichia coli muth gene.

Airlie: Nucleotide sequence of the Escherichia coli muth gene.

Airlie: Nucleotide sequence of the Escherichia coli muth gene.

Airlie: Nucleotide sequence of the Codon CTG for residue 83 as Val

Cicomment: Two temperature-sensitive mutants have also been isolated and sequenced.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

Ag2414

hypothetical protein all4871 [imported] - Nostoc sp. (strain PCC 7120)

C;Species: Nostoc sp.

A)Note: Nostoc sp. strain PCC 7120 is a synonym of Anabaena sp. strain PCC 7120

C;Date: 14-Dec-2001 #sequence_revision 14-Dec-2001 #text_change 30-Jun-2002

- FUNCTION: THIS TA RECEPTOR FOR THE TACHYKININ NEUROPEPTIDE STUBSTANCE P. IT IS PROBABLY ASSOCIATED WITH G PROTEINS THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM.-SUBCELLULAR LOCATION: Integral membrane protein.

- SUBCELLULAR LOCATION: Integral membrane protein.

- MISCELLANEOUS: THE RANK ORDER OF AFFINITY OF THIS RECEPTOR TO TACHYKININS IS: SUBSTANCE P. SUBSTANCE K. NEUROMBDIN K.

- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

HIGHEST TO OTHER TACHYKININS RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Hershey A.D., Krause J.E.;

Biophys. Acta 1131:99-102 (1992).

-!- FUNCTION: THIS IS A RECEPTOR FOR THE TACHYKININ NEUROPEPTIDE SUBSTANCE P. IT IS PROBABLY ASSOCIATED WITH G PROTEINS THAT ACTIVATE A PHOSPHATIDYLINOSITOL-CALCIUM SECOND MESSENGER SYSTEM.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- MISCELLANBOUS: THE RANK ORDER OF AFFINITY OF THIS RECEPTOR TO TACHYKININS IS: SUBSTANCE P > SUBSTANCE K > NEUROMEDIN K.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
HIGHEST TO OTHER TACHYKININS RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cavia porcellus (Guinea pig).

-!- FUNCTION: SEEMS NECESSARY FOR VIRAL DNA REPLICATION, PLAYS AN IMPORTANT ROLE IN THE REGULATION OF CARBID GENE EXPRESSION. IT IS COVALENTLY BOUND TO THE S'TERMINI OF VIRAL DNA, AND CAN INFLUENCE DNA PACKAGING. NSI IS ALSO BELIEVED TO POSSESS THE TOPOISOMERASE I TYPE NICKING ACTIVITY, AND CYTOTOXIC ACTIVITY.

-!- SIMILARITY: BELONGS TO THE PARVOVIRUSES NONCAPSID PROTEIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Afanasiev B.N., Galyov E.E., Buchatsky L.P., Kozlov Y.V.; "Nucleotide sequence and genomic organization of Aedes densonucleosis
                                                                                                                                                                                                                                                                                                                                                                                                                              "Complete sequence analysis of the genome of the bacterium Mycoplasma

-!- FUNCTION: ATP-dependent specificity component of the Clp protease.

It directs the protease to specific substrates. Can perform chaperone functions in the absence of clpP (By similarity).

-!- SUBUNIT: Hererodimer of clpP and clpX (By similarity).

-!- SIMILARITY: BELONGS TO THE CLPX CHAPERONE FAMILY.
                                                                                                                                                                                                                                                            Gaps

Submitted (MAY-1996) to the EMBL/GenBank/DDBJ databases.
-: FUNCTION: DNA-DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPTION
OF DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS
SUBSTRAIES.
                                                        01-00V-1997 (Rel. 36, Last sequence update)
01-NOV-1997 (Rel. 35, Last sequence update)

NNA-directed RNA polymerase II 140 kDa polypeptide (EC 2.7.7.6) (B150)
(RNA polymerase II subunit 2).
RPB2 OR RP022 OR RPB150 OR YOR151C.
Saccharomyces cerevisiae (Baker's yeast).
Eukaryota; Fungi; Ascomycota; Saccharomycotina; Saccharomycetes;

    {RNA} (N).
    SUBUNIT: RNA POLYMERASE II CONSISTS OF 12 DIFFERENT SUBUNITS.
    THIS SUBUNIT IS THE SECOND LARGEST COMPONENT OF RNA POLYMERASE II.
    SUBCELLULAR LOCATION: Nuclear.
    MISCELLANEOUS: THREE DISTINCT ZINC-CONTAINING RNA POLYMERASES ARE FOUND IN EUKARYOTIC NUCLEI: POLYMERASE I FOR THE RIBOSOMAL RNA PRECURSOR, POLYMERASE II FOR THE MRNA PRECURSOR, AND POLYMERASE II FOR SS AND TRNA GENES.
    SIMILARITY: BELONGS TO THE RNA POLYMERASE BETA CHAIN FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
